

## Credentials

### *Proximity*

XceedID proximity credentials provide a convenient access control solution, which can easily be integrated into existing legacy or newly installed proximity systems. XceedID proximity credentials are compatible with industry leading proximity readers and are completely ISO compliant. These extremely durable credentials have a passive design, requiring no batteries or maintenance, and can easily fit into a wallet or be used as a strapped or clipped ID badge.

### *Smart*

XceedID contactless smart credentials put you in control by delivering smarter solutions. The contactless smart credential offers a variety of data storage options, which allows for a wide range of card applications such as biometrics, transit, and point of sale applications such as cashless vending and cafeteria services. Additionally, these credentials utilize high security encrypted data, which is mutually authenticated in communication with the card and the reader, providing enhanced security protection.

### *Multi-Technology*

Get the best of both worlds with XceedID multi-technology credentials. With the ability to be used with both proximity and smart readers, this credential offers maximum flexibility for customers who may be transitioning or merging security systems. Available in a standard ISO-Glossy White credit card-sized credential, XceedID multi-technology cards are ideal for printing employee ID badges.
